REAL Eggs Make a REAL Difference

The American Egg Board

The term egg products refers to processed and convenience forms of eggs for commercial, foodservice, and home use. These products can be classified as dried, frozen, refrigerated liquid, and specialty products. Egg products are widely used as ingredients in many food products because they provide certain desirable functional attributes. The American Egg Board Egg Product Buyers' Guide provides the latest and most accurate listing of U.S. Egg Product Suppliers and the products they produce*. This publication is designed to help you easily identify and locate the type of egg product(s) you require.

In addition there is a section containing nutrient values and typical specifications for egg products.

In this section, you'll discover the many valuable nutrients contained in egg products, reference data and much more. The first large section of the Buyers' Guide contains an alphabetical listing of suppliers by egg product category and is divided into three subsections. Dried Product suppliers, Frozen/Refrigerated Product suppliers, and Value-Added Product suppliers.

The main section of the Buyers' Guide contains an alphabetical listing of suppliers by company name. The contact person(s), address, phone numbers, fax number, email address (if available), website, products available, and distribution area are listed for each supplier. This listing is also available at IncredibleEgg.org/Buyers-Guide in the Food Manufacturers section.

** Information contained in this Buyers' Guide was provided by U.S. egg product suppliers and may not be a complete listing.*

10 Facts to Know About Eggs

⊕ Allergens

A food allergy has been estimated to impact approximately 8% of U.S. children, with peanut, milk, shellfish, and tree nut being the most common. In the U.S., approximately 1% of all children, and ~12% of children with food allergies are allergic to eggs.⁽¹⁾ Egg allergies are considered to have a high rate of resolution in childhood, with approximately 50% of children with egg allergy reaching tolerance between the ages of 2 to 9 years.^(2,3) Early complementary feeding of eggs, once a child is developmentally ready for solid foods, is associated with reduced risk of egg allergy.⁽⁴⁾

♡ Heart Health

Science is in alliance: Heart-healthy eating can include eggs, as supported by an abundance of research including a recent Harvard study evaluating more than 20 years of data⁽¹⁾. Eggs are also recommended for healthy adults as part of a heart-healthy diet according to the American Heart Association⁽²⁾. For most people, eating eggs does not negatively impact blood cholesterol levels. Eggs make it easy to follow a plant-based diet because they pair well with vegetables, which are foods Americans often don't eat enough of⁽³⁾.

○ Choline and Brain Health

The choline in eggs helps support lifelong brain health at every age and stage, including memory, thinking, mood and more. Eggs are one of the few foods rich in choline. Most Americans would benefit from eating more choline to meet the recommended daily intake⁽⁴⁾.

👉 High Quality Protein

Eggs are one of nature's most perfect proteins. Eggs provide a high-quality protein that is often used as a standard for comparing other proteins⁽⁵⁾. Eggs are more than just protein. They are an all-around nutrient powerhouse, a complete protein with essential vitamins and minerals for healthy living. But don't forget the yolks, folks. Nearly half of an egg's protein and most of its vitamins and minerals— including those essential for supporting our brains and bodies — are found in the yolk⁽⁶⁾.

Safety

The Egg Products Inspection Act passed by Congress in 1970 requires all egg products distributed for consumption be pasteurized to destroy *Salmonella*. All further processed and packaged egg products produced in the United States are processed in sanitary facilities under a strict system of inspection supervised by the USDA and pasteurized according to stringent standards to ensure their safety. Learn more about egg pasteurization at IncredibleEgg.org/Pasteurization

Sustainability

Did you know eggs are a climate-friendly source of protein? Between 1960 to 2010, US egg farmers cut greenhouse gas (GHG) emissions by 71% ⁽¹⁾, and the World Resources Institute has categorized eggs as a low GHG-impact source of protein ^(2,3)!

We're incredibly proud of this, but we refuse to stop there. AEB has invested in conducting a new lifecycle assessment (LCA) to provide updated information on the environmental footprint of today's egg farming (now including cage-free production). We have also partnered with the multi-stakeholder U.S. Roundtable for Sustainable Poultry & Eggs to develop a framework and support continuous improvement into the future ⁽⁴⁾.

Gluten Free

All eggs are naturally gluten free. If hens are fed a grain that contains gluten like wheat or barley, the gluten proteins are broken down during the digestive process. Gluten is not passed into the body tissues or any products produced by the hen. When formulating gluten-free foods, it's important to note that eggs can mimic the structure gluten provides.

Clean Label

Eggs supply multiple functional properties to formulators and taking advantage of these benefits can create shorter labels that fit within today's trend of cleaner, simpler, and transparent label statements. Eggs perform complex functional tasks within a wide range of processing parameters while remaining recognizable to consumers as "eggs" on a product label.

20+ Functions

Eggs can perform more than 20 distinct functions in food formulations – such as foaming, coagulation, and gelation – many of which can only be duplicated by the substitution of multiple additives and ingredients. Learn more about the functional benefits of eggs at IncredibleEgg.org/Functionality

Using Further Processed Eggs

Converting from shell eggs to liquid or dried eggs in your formulas is easy and won't affect your bowl cost. It's simply a weight for weight substitution. Use the conversion chart below or watch a how-to video and download helpful worksheets at IncredibleEgg.org/Conversion

CONVERTING FROM SHELL EGG TO LIQUID EGG OR DRIED EGG PRODUCTS

	FROZEN PRODUCT (LB)	SHELL EGG* (QUANTITY)	EGG SOLIDS (LB)
WHOLE	1	9	0.25 Solids + 0.75 Water
YOLKS	1	27	0.45 Solids + 0.55 Water
WHITES	1	14	0.12 Solids + 0.88 Water

* Based on 56g shell egg (25.8 oz. per dozen) yielding 50g whole, 17g yolk, and 33g white per egg.

Dried Egg Products

Because most of their moisture is removed, dried egg products have a longer shelf life and are shelf stable. Dried egg products readily reconstitute and easily blend with other dry ingredients.

Applications

Bakery mixes, noodles, confections, salad dressings & sauces, meat analogs, coatings & batters

Availability

3- and 25-lb. poly packs; 25- and 50-lb. boxes; 150-, 175- and 200-lb. drums

Storage & Handling

Unopened dried egg products can be stored at room temperature (22 - 25° C / 71 - 77° F) as long as they are kept cool and dry. After opening, store in the refrigerator at 4° C / 40° F or below.

Once containers of egg solids have been opened, reseal tightly to prevent contamination and absorption of moisture. Reconstituted egg products should be used immediately or refrigerated and used that day.

If dried eggs are combined with dry ingredients and held for storage, they should be sealed tightly in a closed container and stored in the refrigerator at 32° to 50° F (0° to 10° C). Plain unstabilized whole egg solids and egg yolk solids have a shelf life of about one month at room temperature and about a year at refrigerated temperatures. Store dried eggs as any other dried, powdered food in a cool, dark place. Dried egg products should flow freely and not be clumped or hardened. Use well within expiration dates.

A background image of several ice cream sandwiches. One is in sharp focus in the foreground, showing two chocolate chip cookies with a thick layer of vanilla ice cream in between. Other sandwiches are visible in the background, slightly out of focus. The sandwiches are resting on a blue surface.

Refrigerated/Frozen Egg Products

Both refrigerated and frozen egg products can be used in any formula where shell eggs are required. These types of egg products are easily integrated into manufacturing systems, including pumping and extrusion.

Applications

Mayonnaise & salad dressings, dough, pie bases & fillings, confections, bakery, baby food, noodles

Availability

Bulk tank trucks, totes, metal or plastic containers, polyethylene-coated fiber or laminated-foil and paper cartons, and hermetically-sealed, polyethylene bags. Container size from small bags to cartons (8 oz. to 5 lb.), intermediate-size bag in boxes and pails (20 to 40 lb.), and larger drums and totes (200 to 3,500 lb.).

Storage & Handling

Refrigerated products should be kept at 40° F (4° C) or below.

Frozen products should be stored at 0° F (-17° C) or below and show no signs of having been thawed. Thaw egg products in the refrigerator or under cold running water. Use well within expiration dates.

Value-added Products

Egg products are available in a multitude of convenient, value-added, and precooked forms, offering manufacturers flexibility in creating ready-to-heat packaged items that require consistency and portion control. Many types of egg products can be customized to include the addition of other ingredients, including herbs, spices, cheeses, and diced vegetables. Sometimes they will contain other ingredients to maintain product quality and assist with freeze-thaw stability.

Applications

Convenience items such as sandwiches, burritos and bowl meals, plus salad components

Storage & Handling

Keep refrigerated or frozen according to egg product type and use well within expiration dates.

VALUE-ADDED EGG PRODUCTS

Egg Product Suppliers

American egg products are produced and distributed throughout the U.S. and world. There are three ways to search for a supplier of the egg products you need for your operation by — company, type of egg product, and geographic area. Each company listing includes the types of products offered and contact information.
