

**FEED:** Advancements in feed efficiency play a key role in enabling the egg industry to reduce its environmental footprint.

Today's hens use a little over **half the amount of feed** to produce a dozen eggs

Using 1960 technology to produce today's supply of **77.8 billion eggs** would have required

**78**  
million  
more hens

**1.3**  
million more  
acres of corn

**1.8**  
million  
more acres  
of soybeans
